Oxford University Press. Paperback. Book Condition: New. Paperback. 384 pages. Dimensions: 9.1in. x 6.1in. x 0.8in. This clear and accessible textbook introduces students to the brain's remarkable capacity for memory. It begins with a history of thinking and research on the biological bases of memory, highlighting discoveries about the brain made in a Golden Era of neuroscience around the turn of the 20th century. This is followed by presentation of our current understanding of the neurobiology of memory, organized into sections corresponding to the book's four major themes. The first is Connection, and it considers how memory is based on alterations in the communication between nerve cells. Research on the physiology and biochemistry of neurons has revealed a cascade of molecular events and structural changes that enhance or weaken the connectivity of nerve cells in support of memory. The second theme is Cognition, which considers the psychological structure of memory. Early work on this topic involved controversy over the basic cognitive processes that underlie memory, and modern research has shown that these characterizations reflect distinctions among qualitatively different forms of memory. The third theme is Compartmentalization, the notion that the different forms of memory are accomplished by distinct brain systems. Recent research has revealed parallel memory systems that separately mediate our ability for conscious recollection, our capacity to acquire skills and habits, and our acquisition of emotional attachments and aversions. The fourth theme is Consolidation, the process by which memories are transformed from a labile trace into a permanent store. Scientists have shown that there are two distinct stages in memory consolidation, one involving cellular mechanisms that underlie a fixation of changes in the neuronal connection strengths and the other involving a reorganization and restructuring of the circuits that store and retrieve memories. The book assumes little background knowledge from biology...
