

## Deposition and Characterisation of Crystalline Silicon

Filesize: 2.05 MB

### ***Reviews***

*It becomes an amazing ebook that we have possibly read through. It is really simplified but surprises within the 50 % from the ebook. You can expect to like how the blogger compose this book.  
(Ms. Shaina Legros III)*

## DEPOSITION AND CHARACTERISATION OF CRYSTALLINE SILICON

DOWNLOAD

To read **Deposition and Characterisation of Crystalline Silicon** PDF, you should click the button beneath and save the ebook or have access to other information that are have conjunction with DEPOSITION AND CHARACTERISATION OF CRYSTALLINE SILICON book.

Fraunhofer Verlag Dez 2014, 2014. Taschenbuch. Book Condition: Neu. 24x17x cm. Neuware - The presented thesis will discuss the recent development in the deposition of silicon by atmospheric pressure chemical vapour deposition (APCVD) and the characterisation of these crystalline silicon thin films at Fraunhofer ISE. In the second Chapter a short overview of the process technologies for chemical vapour deposition (CVD) will be given. A general and a simplified model for the silicon deposition will be discussed. Furthermore, the rapid thermal deposition tool and the standard deposition process will be described. This includes the influence of critical process parameters, the mechanism of doping incorporation and the deposition of epitaxial emitters. One main objective of this thesis, the silicon deposition at a temperature from 1100 °C to 850 °C by APCVD, will be described in Chapter 3. The different properties of epitaxial and microcrystalline growth will be identified. A description of the process optimisation and a detailed process characterisation will be given. In the 4th chapter the fundamentals of crystal growth, the formation of crystal defects and the characterisation of these defects, will be used to improve the silicon deposition by APCVD. The focus will be on the crystallographic characterisation by X-ray diffraction, electron backscatter diffraction, Raman spectroscopy and photo luminescence. Using these characterisation methods the material quality depending on process parameters and the growth interface of crystalline silicon thin films will be investigated. The electrical characterisation of these layers will be the main subject in Chapter 5. More specific, the determination of the effective minority carrier lifetimes of silicon thin films and silicon wafers after the deposition process will be presented and discussed. The characterisation is primarily based on microwave photo conductance decay and quasi steady state photo conductance measurements. I After the process development and the material characterisation, the...
